ILTS - 350

The ORICS ILTS In Line Tray Sealer is designed to integrate with virtually any conveying system. Trays can be presented to the ILTS either random or evenly spaced. The ILTS pre-stages the incoming trays and then orients them to the proper center distance prior to picking and placing them into the sealing carrier.

The ILTS is designed to operate at up to 15 cycles per minute and tooling changeovers typically take less than 10 minutes to accomplish. The ILTS' small footprint and flexible operation make it an ideal choice for smaller and medium production applications.

IDEAL FOR FRESH OR
FROZEN FOODS

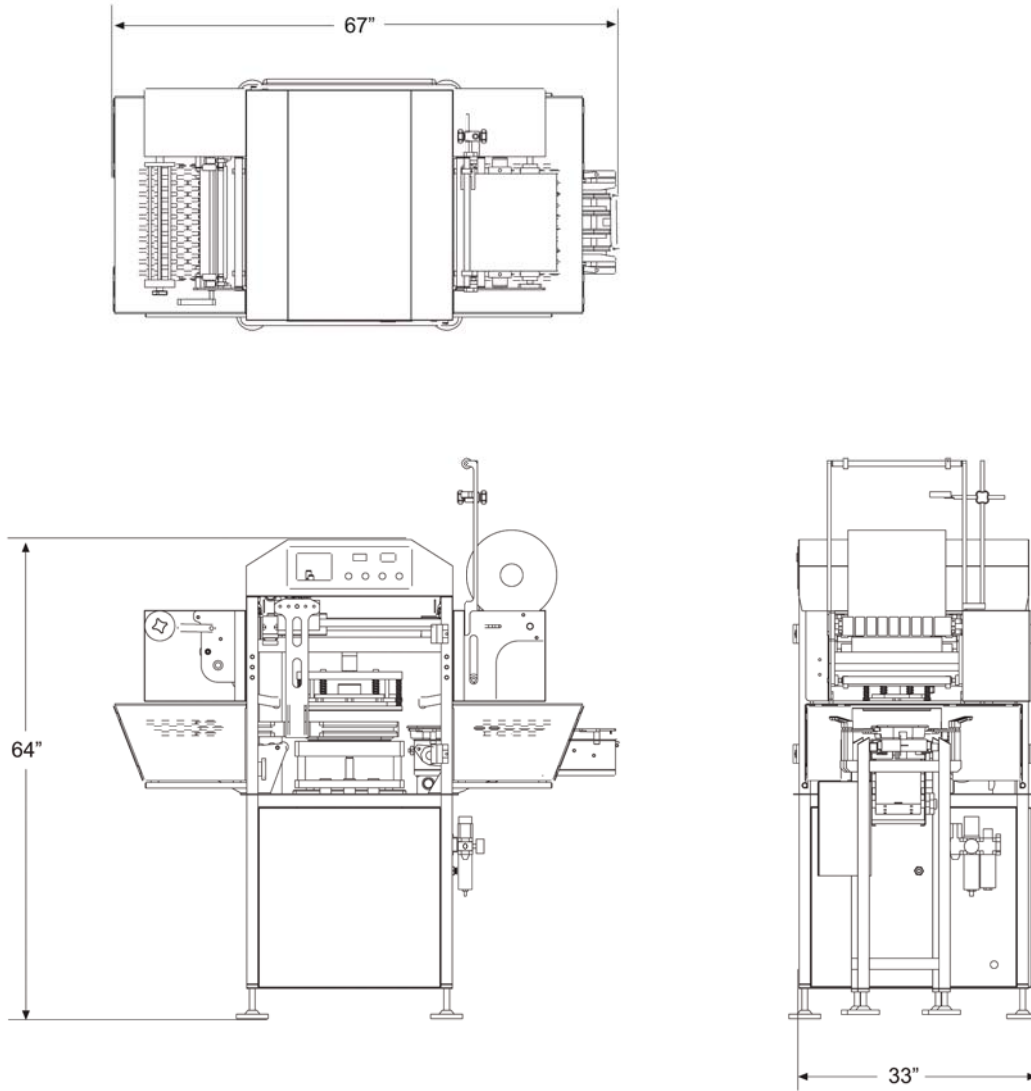

SINGLE LANE / SINGLE TOOL

DESIGNED FOR ROLLSTOCK FILM

INTERMITTENT MOTION TRAY SEALER WITH RANDOM INFEEED
