S-30 Eco-Cut

Most tray sealers generate excess film that needs to be handled, discarded and ultimately recycled at significant cost. The Eco-Cut® system by ORICS eliminates this film waste by cutting the film in between each container, leaving no wasted film and potentially saving \$40,000, or more, per year in material costs alone. Eco-Cut® also lessens a producer's carbon footprint and environmental impact. Over time, an Eco-Cut® system practically pays for itself; turning environmentally-conscious eco-friendly design into verifiable savings.
